where the listed membranes and O-rings are made from the below mentioned rubber material:

3	Material	
	Name	BUTYL (Isobutylene Isoprene Rubber)
	Specifications:	The components made from the material have specific properties against temperature, moisture, acidity, fat content etc. Specific or relative limits are given in datasheets for the individual item (i.e. a membrane) or the component (i.e. a valve head). The data sheets with the most recent information are available at our website www.keofitt.dk . If an actual useful range of a given specification is incompatible with the anticipated use, alternative materials with better specifications are often available.
	Intended use	The rubber material is intended to seal against liquids in the liquid processing industries such as breweries, dairies, fruit juices, other liquid foodstuff, biotech and pharmaceuticals. Simultaneously it is designed to be pierced several times with a needle to extract a liquid sample from the process side. For more information please consult the relevant data sheets and User Manuals available at our website www.keofitt.dk .
	Additional information	The materials contact area per volume or weight of the end-user's liquid product media will in most cases be negligible.
	ADI free	All products made of butyl are free of animal derived components.
	BSE/TSE	All products made of butyl are free from BSE (Bovine Spongiforme Encephalopathies) and TSE (Transmissible Spongiforme Encephalopathies).

hereby declares that all the above-mentioned items having liquid product contact and made from the above-mentioned material comply with the terms laid down in the regulations below as amended at the time of the underlying declarations from our suppliers:
